

# Additional pathways mediating death?

# Autophagy

- The primary intracellular catabolic mechanism for degrading and recycling proteins and organelles

Yoshimori, 2003

## Autophagy physiological roles:

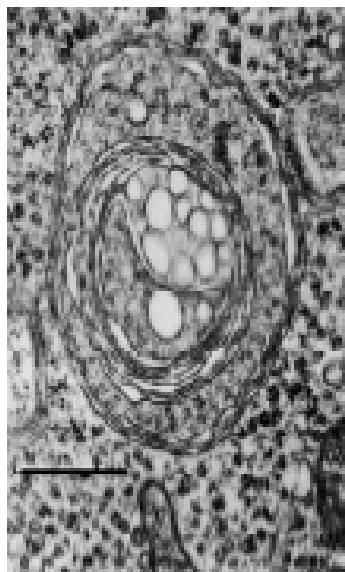

- Response to stress  
(hypoxia, overcrowding, high temperature, accumulation of damaged cytoplasmic components)
- Growth regulation & development
- Innate immunity
- Ageing

# Is autophagy involved in necrosis?

→ Upregulation of autophagy in neurodegenerative diseases

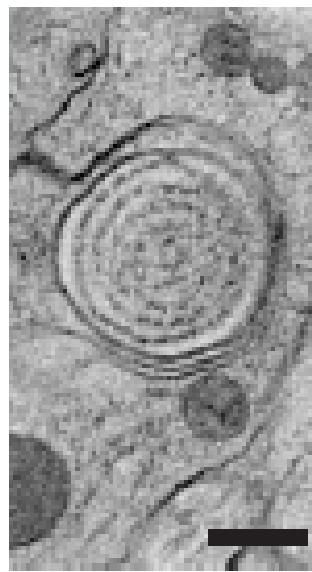

(also in cancer, cardiomyopathy, muscular disorders)

Autophagosomes  
in mouse neurons

(Yue et al. 2002)

Autophagosomes  
in *C. elegans*

(Meléndez et al., 2003)

Rats: Glu excitotoxicity

(Rothstein et al., 1996)

→ Multivesicular structures in both autophagy and necrosis

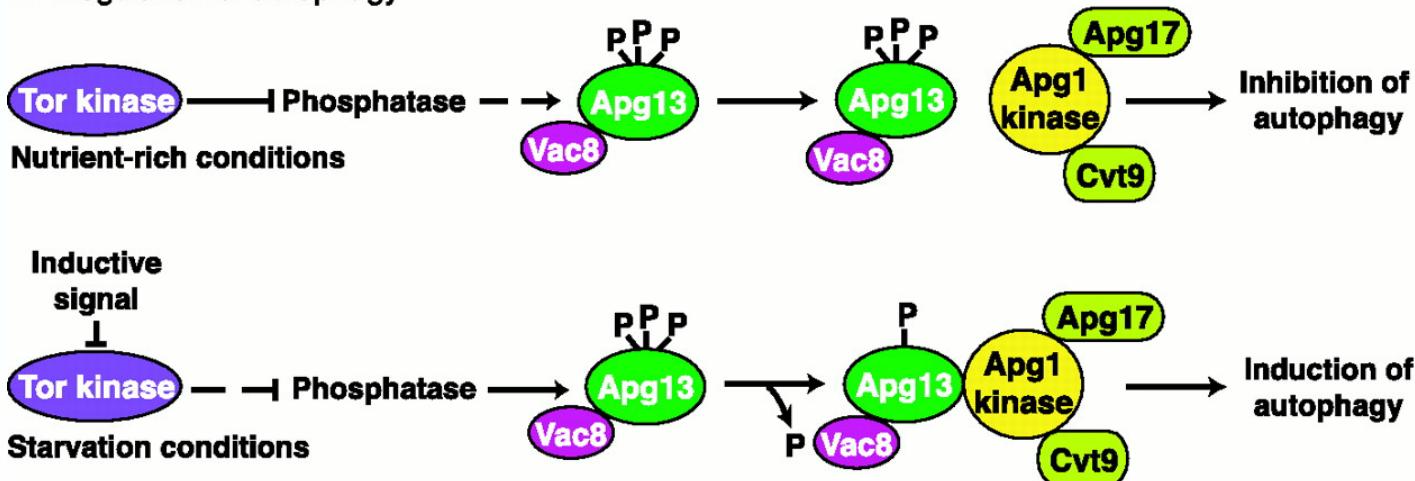

# **Upregulation of autophagy in neurodegenerative diseases:**

---

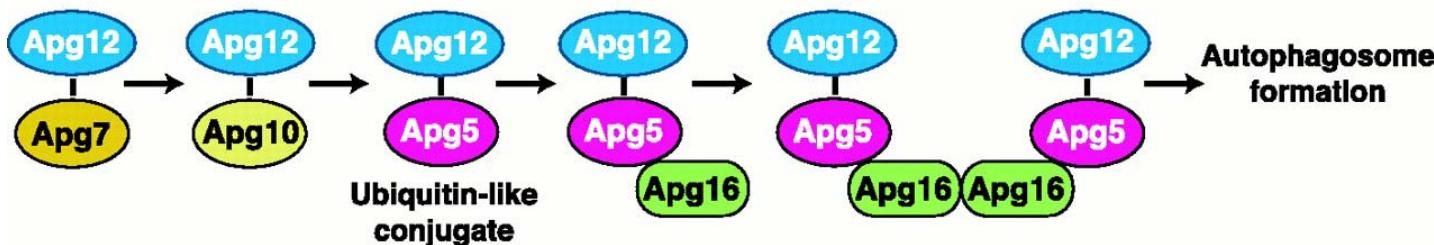

**A guardian angel or a mediator of cell death?**

# Molecular mechanisms of autophagy

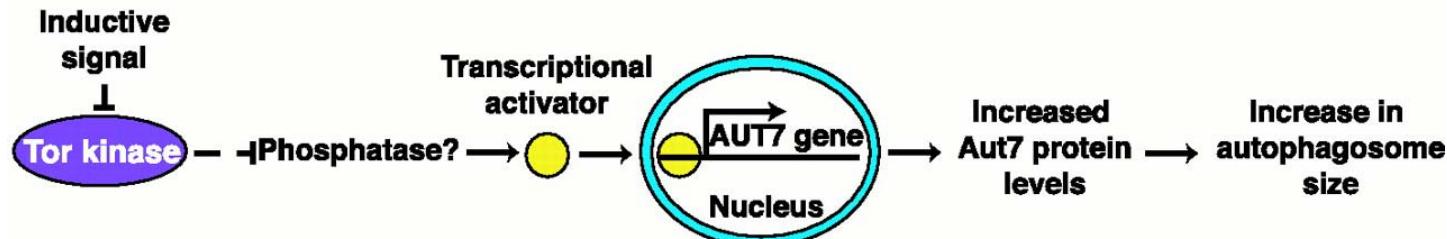

## A Regulation of autophagy

## B Autophagosome formation

## C Size regulation of the autophagosome

Autophagy-Related Genes

Protein Function

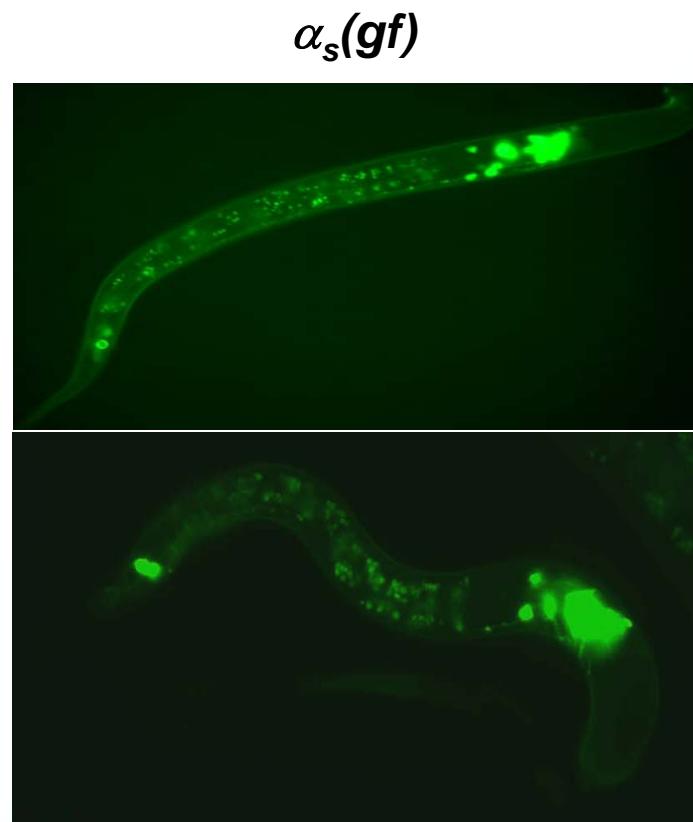

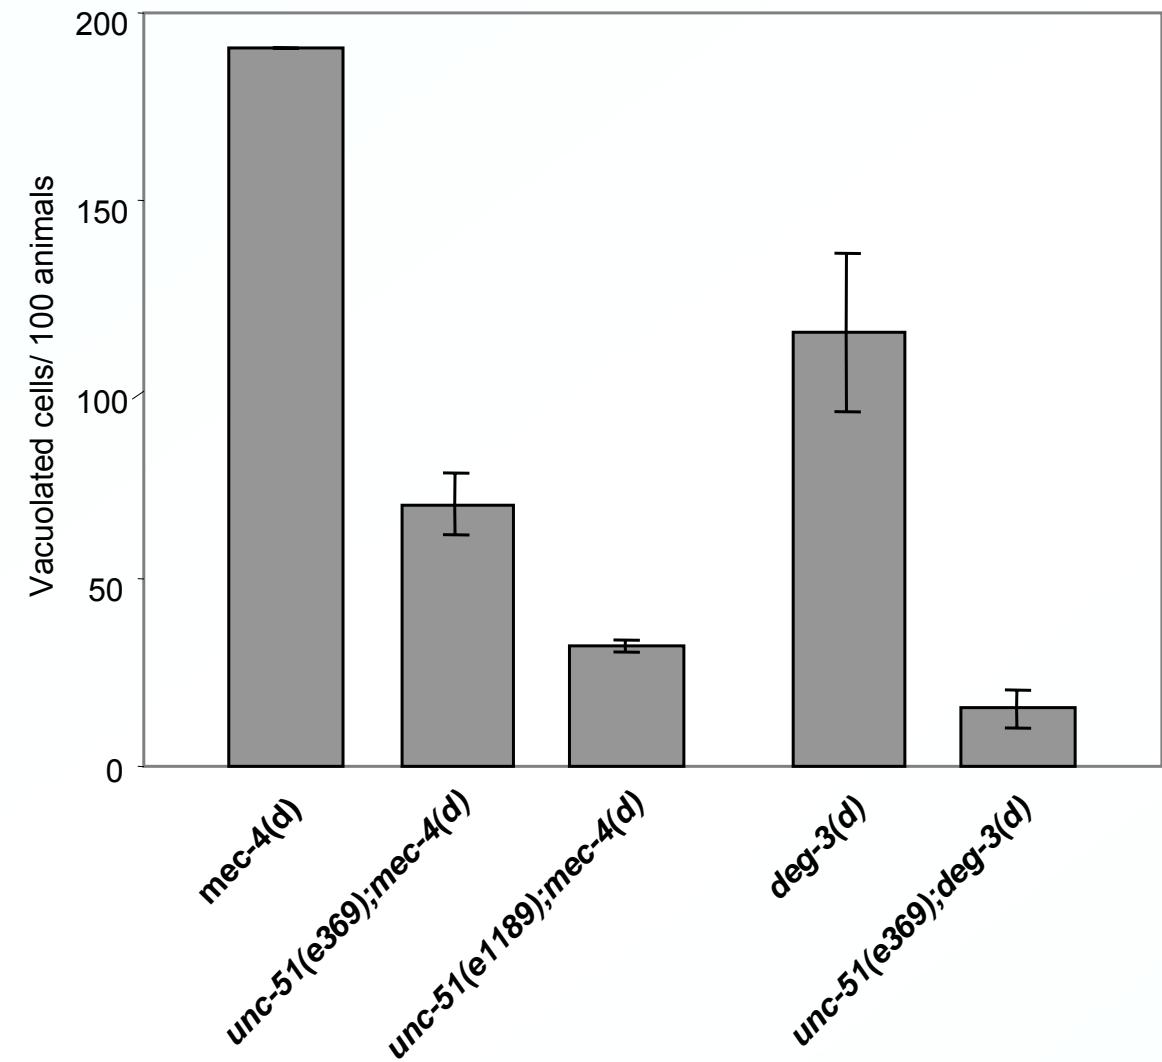

Regulation of Autophagy

<i>Sc TOR2</i>	<i>Sc TOR2</i>	Rapamycin-sensitive protein kinase	<i>let-363</i>
<i>Sc ATG6</i>	<i>Mm beclin1</i>	Component of PI3-kinase complex	<i>bec-1</i>
<i>Sc ATG1</i>	<i>Hs ULK2</i>	Protein kinase	<i>unc-51</i>

Formation of Autophagosomes

<i>Sc ATG3</i>	<i>Mm Apg3/Aut1-like</i>	E2-like enzyme; conjugates Atg8 to PE	Y55F3AM.4
<i>Sc ATG4</i>	<i>Mm autophagin 1</i>	Cleaves C-terminal extension or PE from Atg8	Y87G2A.3
<i>Sc ATG5</i>	<i>Mm Autophagy 5-like</i>	<b>Conjugated to Atg12 through internal lysine</b>	Y71G12B.12
<i>Sc ATG7</i>	<i>Mm APG7</i>	<b>E1-like enzyme; activates Atg8 and Atg12</b>	M7.5
<i>Sc ATG8</i>	<i>Mm GABARAP-like 1</i>	<b>Ubiquitin-like protein conjugated to PE</b>	<i>Igg-1</i>
<i>Sc ATG9</i>	<i>Hs APG9-like 1</i>	<b>Integral membrane protein</b>	T22H9.2
<i>Sc ATG10</i>	<i>Mm autophagin 10-like</i>	E2-like enzyme; conjugates Atg12 to Atg5	D2085.2
<i>Sc ATG12</i>	<i>Hs APG12</i>	<b>Ubiquitin-like protein conjugated to Atg5</b>	<i>Igg-3</i>
<i>Sc ATG16</i>	<i>Hs APG16-like isoform 2</i>	Component of Atg12-Atg5 complex	K06A1.5
<i>Sc ATG18</i>	<i>Sc ATG18</i> <i>Hs AAQ96867</i>	<b>Localization of Atg2</b>	F41E6.13

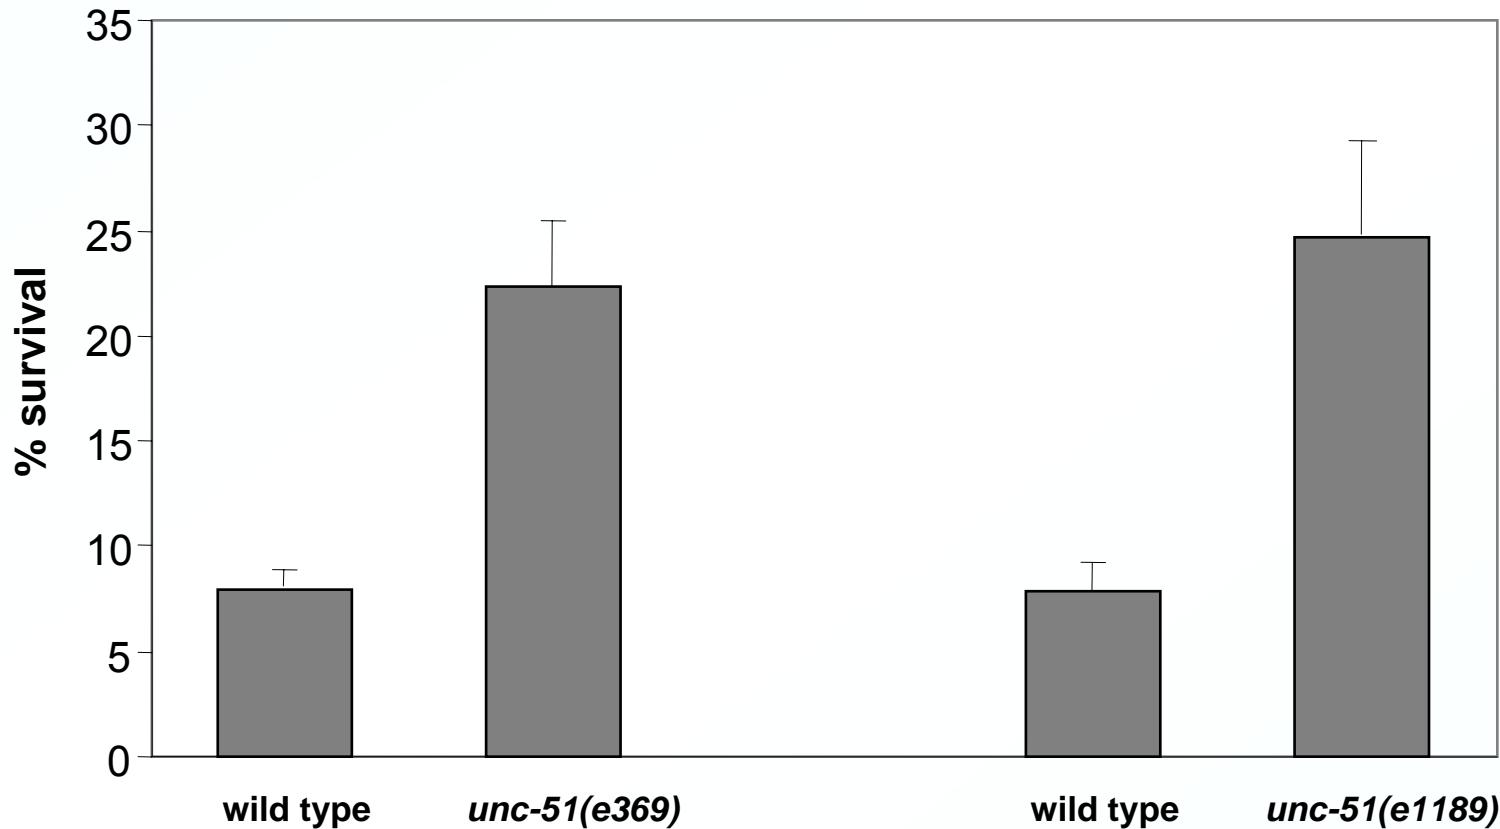

# *unc-51* mutations generally suppress neurodegeneration

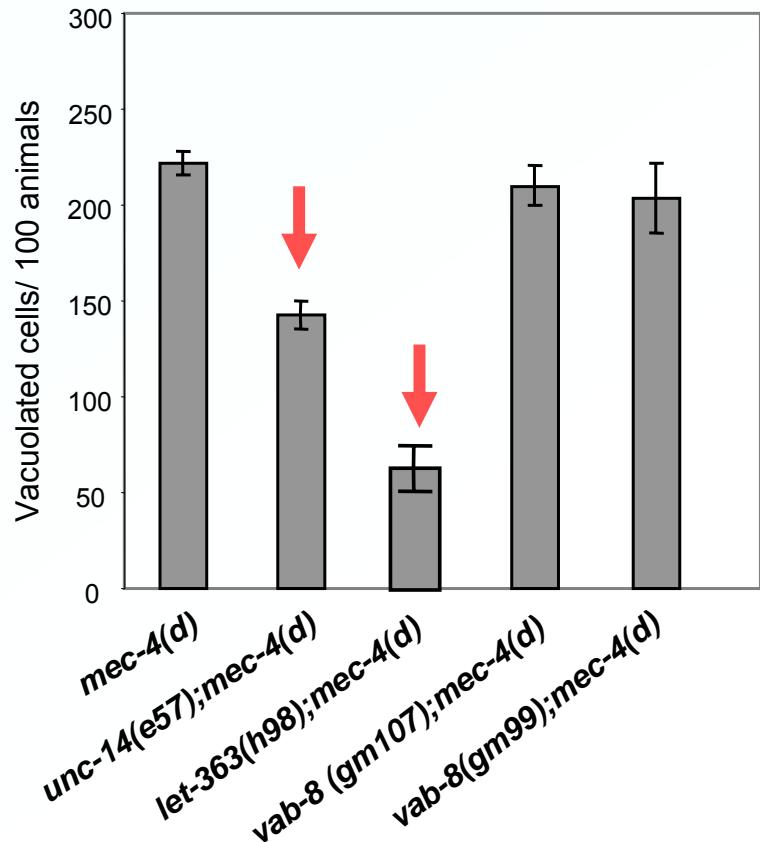

*unc-51(e369); $\alpha_s(gf)$*

# *unc-51* mutations improve survival under hypoxia

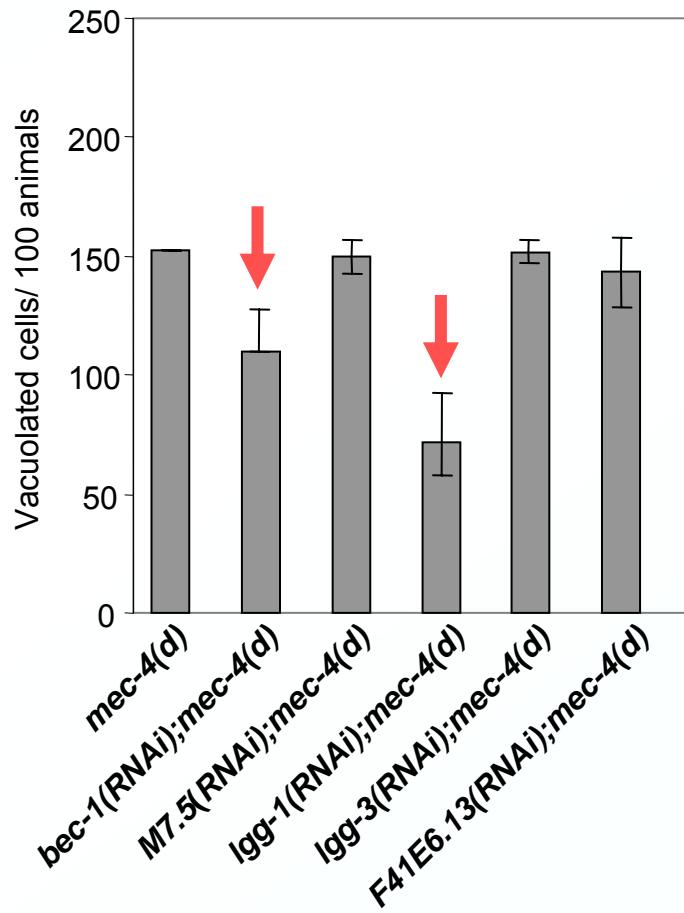

---

# Specific autophagy genes are required for necrotic cell death

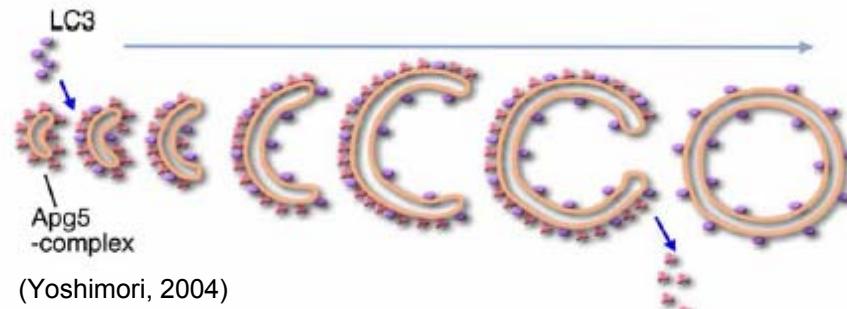

- *let-363*
- *unc-51*
- *unc-14*
- *bec-1*
- *Igg-1*

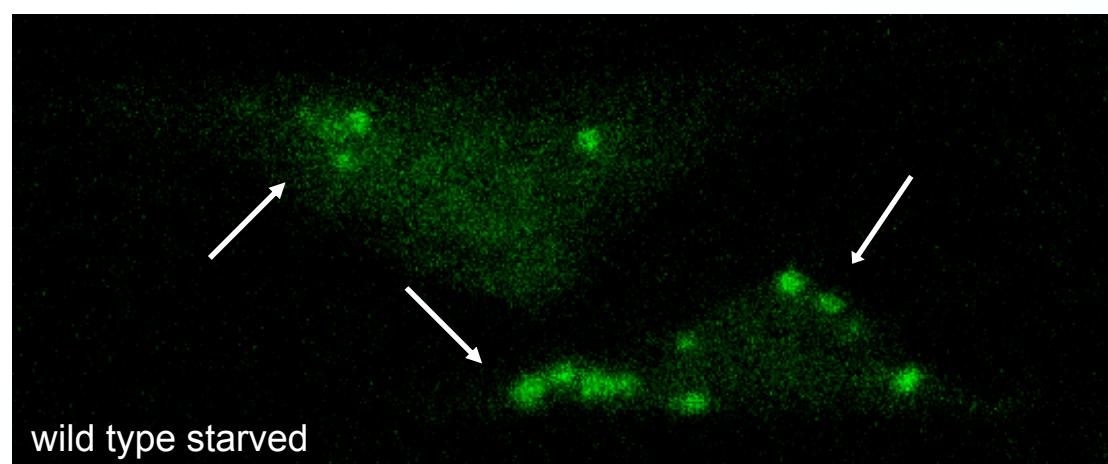

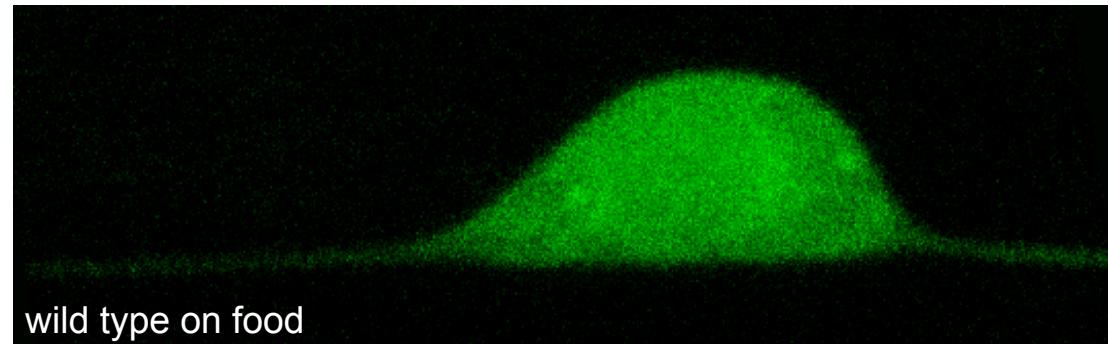

Induction of autophagy  
Formation of autophagosomes

# Detection of autophagosomes in degenerating neurons

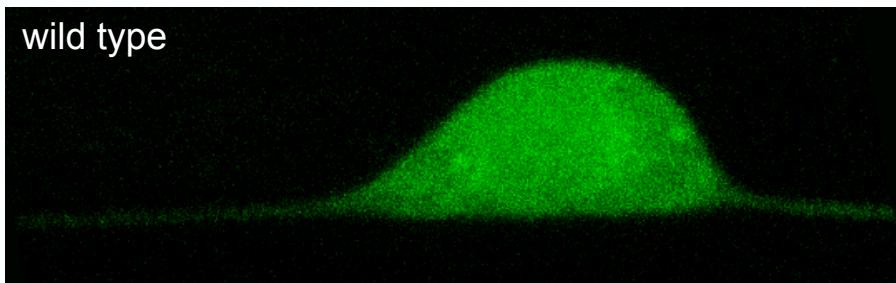

$P_{mec-7}$ GFP::LGG-1

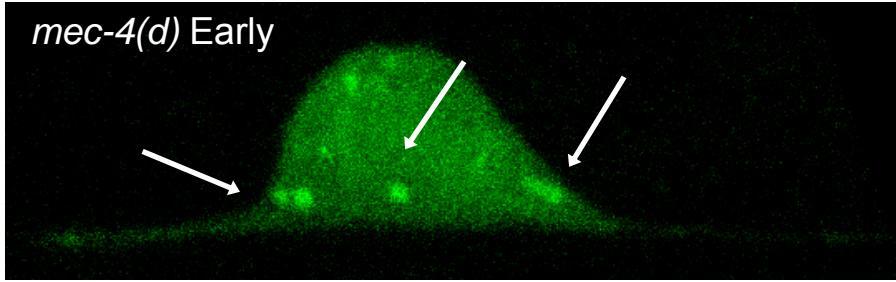

# Upregulation of the autophagosomal system precedes degeneration of *mec-4(d)* neurons

wild type

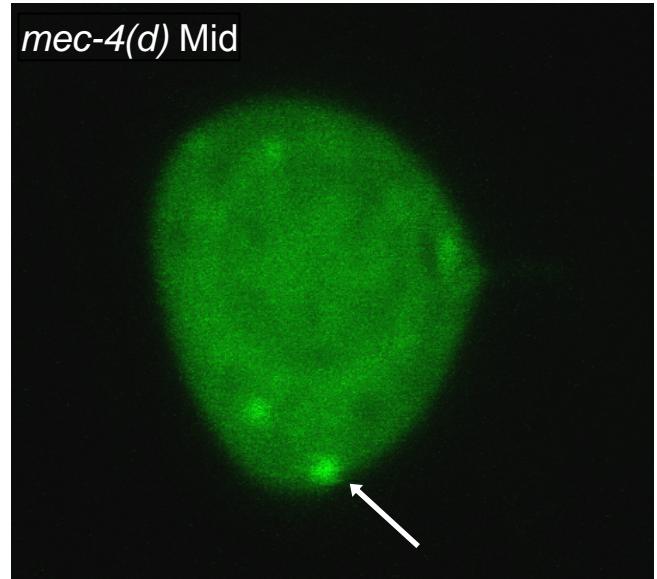

$P_{mec-7}$ GFP::LGG-1

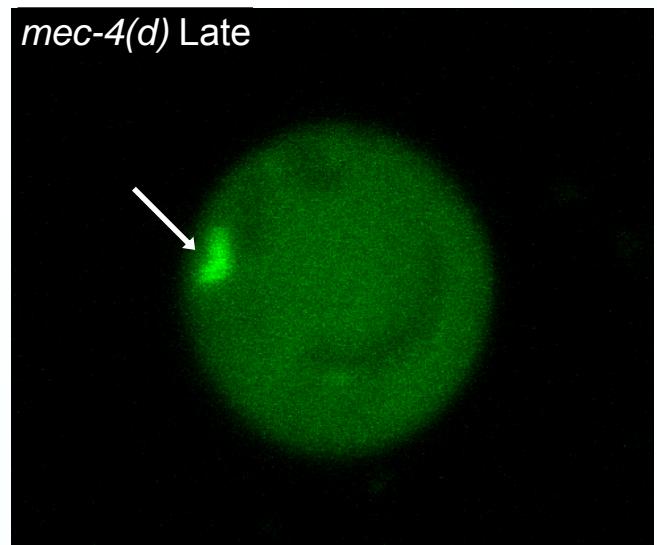

*mec-4(d)* Early

*mec-4(d)* Mid

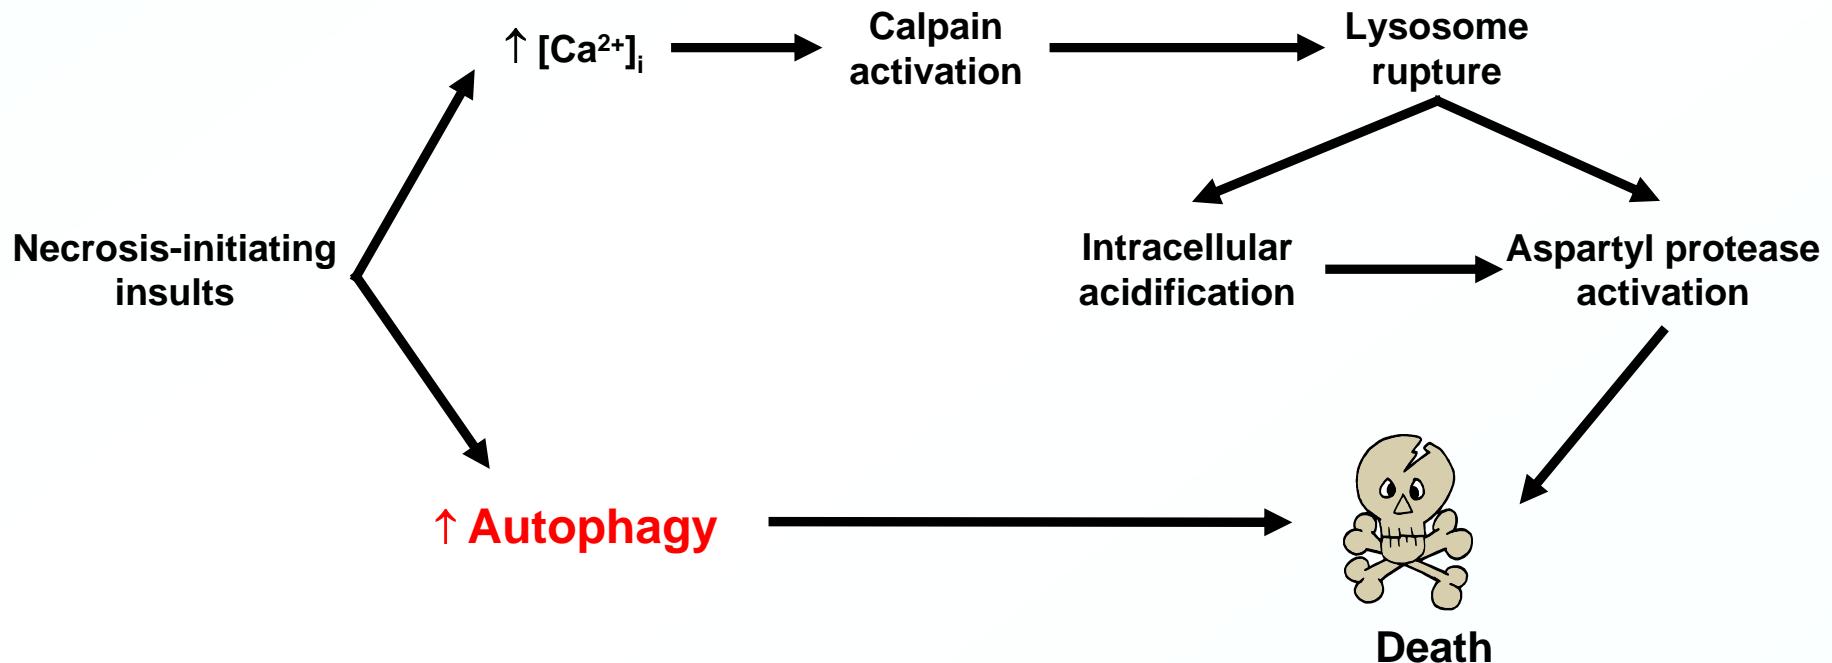

*mec-4(d)* Late

# Autophagy is required for, and is induced during, neurodegeneration in *C. elegans*

---
